Heavy Duty Rubber Strut Rod Bushings

to fit

BMW X5

The original design of the strut rod bushings on the on the BMW's have been a constant issue concerning premature failure and undampened vibrations being transfer from the road surface and through the suspension and steering linkage into the passenger compartment. The strut rod support support bushings are design to dampen the thrust forces created during braking and acceleration. The original bushings on all the later model BMW's are hydraulic and have a tendency to loose their sealing capabilities and leak oil early in their service life. MEYLE has now added the X5 Heavy Duty Rubber and and E38/E39 Standard bushing to their product line of high quality longer life suspension bushings.

Standard Version Rubber Strut Rod Bushings

to fit

BMW E38 & E39 V8

Since both bushing versions are the same dimensions the X5 HD bushing can also be used in the in place of the standard bushing in the E38 and the E39 V8 models if so desired. MEYLE has redesigned both of these bushing numbers and produce them in a more resilient rubber version instead of the original hydraulic designs.
